

iTech Matrimony Script v6.11

Description:

Matrimonial websites are a variation of the standard dating website. Matrimonial sites are popular in India and among Indians settled overseas, as an alternative to the traditional marriage broker. Matrimonial sites register users, after which they are able to upload their profile onto a searchable database maintained by the website. Those users looking to find matching profiles search the database with customized searches that typically include nationality, age, gender, availability of photograph and often religion, geographic location and caste.

[wiki] iTech Matrimony Script is a popular matrimony cum dating script developed in jQuery, PHP and MySQL. This product is considered the best in category. We offer extensive customization (design and development) of this product at minimum charges.

This product can be further customized to launch a website like Idontwantdowry, Eastmeeteast, Seekingmillionaire, Millionairedates, Bharatmatrimony, Spiritualsingles, Marriedtothearmy, Jumpdates etc.
