

Ez Pinterest Clone v4.13

Social Networking Script

Description:

A Web site used to store and share photos. Users upload their pictures to the site, which are stored on the server and made available to friends and family via personal Web pages. Photo sharing has become increasingly popular in recent years as a means for individuals or organization to publish their digital images online. As a result, some of the photo sharing sites that host these images have become useful sources of free or low-cost images. A photo sharing site is one which provides the means for a user to upload their digital images saved in a common image format such as JPEG, GIF or PNG) to a third party online server. Photo-sharing websites offer services such as uploading, hosting, managing and sharing of photos (publicly or privately). The term can also be applied to the use of online photo galleries that are set up and managed by individual users, including photo blogs. Sharing means that other users can view but not necessarily download the photos.
