

iTech Travel Script v9.69

Description:

A travel website is a website on the world wide web that is dedicated to travel. The site may be focused on travel reviews, trip fares, or a combination of both. Approximately seventy million consumers researched travel plans online in July 2006. Individual airlines, hotels, bed and breakfasts, cruise lines, automobile rental companies, and other travel-related service providers often maintain their own web sites providing retail sales. Many with complex offerings include some sort of search engine technology to look for bookings within a certain timeframe, service class, geographic location, or price range.

[wiki] iTech Travel Script is a popular vacation and travel management software developed in jQuery, PHP and MySQL. This product is considered the best in category. We offer extensive customization (design and development) of this product at minimum charges.

This product can be further customized to launch a website like Visitscotland, Dtravelsround, Momondo, Trazeetravel, Hecktictravels, Cheapticketscanada, En, Matadornetwork etc.
