

iTech Payment Gateway Script v8.58

Description:

A payment gateway provides a secure connection between your online store and your internet merchant account. It is an e-commerce application service provider that authorizes credit card payments for e-businesses, online retailers, bricks and clicks, or traditional brick and mortar. It is the equivalent of a physical point of sale terminal located in most retail outlets. Payment gateways protect credit card details by encrypting sensitive information, such as credit card numbers, to ensure that information is passed securely between the customer and the merchant and also between merchant and the payment processor. A payment gateway facilitates the transfer of information between a payment portal and the Front End Processor or acquiring bank.

[wiki] iTech Payment Gateway Script is a web based payment gateway software developed in jQuery, PHP and MySQL. This product is considered the best in category. We offer extensive customization (design and development) of this product at minimum charges.

This product can be further customized to launch a website like Globalpaymentz, Skrill, Xsolla, Mijireh, Coindesk, Quantumgateway, Boku, Magentocommerce etc.
