

# iTech Video Sharing Script v5.26

---

## Description:

A video hosting service allows individuals to upload and share personal, business or royalty-free videos and to watch them legally. The type of video content uploaded can be anything from short video clips all the way to full length movies. With the increasing prevalence of technology and the Internet in everyday life, video hosting services serve as a portal to different forms of entertainment, whether it be comedy, shows, games, or music. Content may be either both user-generated or commercial product. The entertainment industry now uses this medium to release music and videos as well as movies and television shows directly to the public. Since many users do not have unlimited web space, either as a paid service, or through an ISP offering, video hosting services are becoming increasingly popular, especially with the explosion in popularity of blogs, internet forums, and other interactive pages.

[wiki] iTech Video Sharing Script is a popular video sharing script developed in jQuery, PHP and MySQL. This product is considered the best in category. We offer extensive customization (design and development) of this product at minimum charges.

This product can be further customized to launch a website like Pikel, Mymfb, Hollywoodreporter, Channel2, Hulu, Hostpapa, Schooltube, Bigthink etc.
